Areas of Professional Interest and Expertise:

Management and education of Chronic Kidney Disease; Raising awareness of implicit bias in health care; Teaching residents and medical students a multidisciplinary approach to patient care

Candidate Statement:

I have been proud to serve NYACP during the past seven years, as both president and councilor for the Southern Tier district. During that tenure, I celebrated our victories in lobbying to temper documentation requirements for opioid prescriptions and to control malpractice cost. I also witnessed some setbacks. The experience, both victory and defeat, has deepened my commitment to ACP's mission and the critical role it plays on behalf of physicians and patients. My experience outside ACP—particularly as chair of the department of medicine and as associate director for the residency program—has given me substantial expertise in physician advocacy and education. I also

gained a deep understanding of the intricate relationship between physicians, health care systems, insurance companies, and governing bodies. In sum, I have the expertise and conviction to be an effective, productive Governor. I would be honored to continue my service of ACP in that capacity.
